

## CISC275 Javadoc Exercise

The Java API document is automatically generated by parsing comments written in the Java library code. From now on, your code for 275 assignments (especially your project, but not in-class prototyping exercises) will contain javadoc comments and you will generate useful documentation automatically. Oh Rapture!

At a minimum all methods, parameters, returns, and attributes must be tagged and the description filled. Here's how:

<http://www.oracle.com/technetwork/articles/java/index-137868.html>

Add javadoc notation to some project code now (you should already have stubs and tests!). Show your TA the results of running javadoc on at least four related files, displaying author, parameter, return, and throws (if any).

At a minimum, all project files will have @author tags, and all project methods will have @param and @return tags.
